DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6 January 2011 has been entered.

Terminal Disclaimer

2. The terminal disclaimer filed on 6 January 2011 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent number 6,839,400 has been reviewed and is accepted. The terminal disclaimer has been recorded.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Blair M. Hoyt on 9 March 2011.

The application has been amended as follows:

Art Unit: 2882

In claim 20, line 1, change “computer-readable medium” to --non-transitory computer-readable medium--.

In claim 23, line 1, change “computer-readable medium” to --non-transitory computer-readable medium--.

Allowable Subject Matter

4. Claims 1, 3-6, 11-12, 14-15, 17-20, 23 and 25 are allowed.

5. The following is an examiner’s statement of reasons for allowance:

With respect to claim 1, the prior art does not teach or fairly suggest a method including the steps of during backprojection, rays are weighted as a function of corresponding position in the beam with a weighting function representing a smooth function of row number, the weighting function having a value of one for rays to at least one centrally located detector row and tending to zero for rays to detector rows towards an edge of the detector rows, and zero for rays to detector rows at the edge of the detector rows, when taken in combination with the other limitations of the claim. Claims 3-6, 11-12, 17-20, 23 and 25 are allowed by virtue of their dependency.

With respect to claim 14, the prior art does not teach or fairly suggest a device including means for backprojecting the filtered data, wherein, during the backprojection, rays are weighted as a function of corresponding position in a beam with a weighting function representing a

Art Unit: 2882

smooth function of row number, the weighting function having a value of one for rays to at least one centrally located detector row and tending to zero for rays to detector rows towards an edge of the detector rows, and zero for rays to detector rows at the edge of the detector rows, when taken in combination with the other limitations of the claim. Claim 15 is allowed by virtue of its dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Response to Arguments

With respect to Applicant’s arguments with respect to the relationship between the weighting function of Tuy and position of the vertex, the Examiner notes that the position of the vertex of the source is directly related to the image of the voxel on the detector. However, Tuy fails to disclose “zero for rays to detector rows at the edge of the detector rows” as amended in claims 1 and 14 as noted in the reasons for allowance above.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN M. CORBETT whose telephone number is (571)272-8284. The examiner can normally be reached on M-F 8 AM - 4:30 PM.

Art Unit: 2882
